

CHEMICAL COMPATIBILITY STORAGE GUIDELINES

Chemical storage **SHOULD**:

- Always be in compatibility groups as shown below.
- Be in a cool, well-ventilated area away from direct sunlight.
- Have sufficient secondary containment to contain spills in case of container failure.

Chemical storage **SHOULD NOT**:

- Be in a chemical fume hood.
- Be above eye-level if hazardous.
- Be on the floor or under the sink.
- Be in a metal cabinet or on shelving supported by metal pins if corrosive.

A	Organic Bases
B	Pyrophoric & Water Reactives
C	Inorganic Bases
D	Organic Acids
E	Oxidizers, Peroxides
F	Inorganic Acids (Not Inc. Oxidizers, Combustibles)
G	Not Reactive, Flammable, or Combustible
L	Non-reactive Flammables, Combustibles, Solvents

X Incompatible With All Other Groups

Regularly check your chemical inventory to make sure container lids are closed securely and that containers are in good condition.
